TOMUS LIV—1990—54. KÖTET

Adams, M. E.—Clark, D. M., Endomorphism monoids in minimal quasi primal varieties 37—52
Banaszczyk, M.—Majchrzak, R., An integral formula for a Riemannian manifold with three orthogonal distributions ..... 201—207
Behrendt, G., Equivalence systems and generalized wreath products ..... 257—268
Bigelov, D.—Burris, S., Boolean algebras of factor congruences ..... 11—20
Bosznay, A. P.—Garay, B. M., Erratum to "On a geometric Problem concerning discs" 209—210
Bouldin, R., The distance to operators with a fixed index ..... 139—143
Burris, S., cf. Bigelov, D. ..... 11—20
Clark, D. M., cf. Adams, M. E. ..... 37—52
Constantinescu, T., Some aspects of nonstationarity. I ..... 379—389
Fried, E.—Grätzer, G., Generalized congruences and products of lattice varieties ..... 21—36
Garay, B. M., An interpretation of Cellina's example: negligibility via the failure of Peano's theorem ..... 115—127
Garay, B. M., cf. Bosznay, A. P. ..... 209—210
Геворкян, Г. Г., cf. Талалян, А. А. ..... 277—283
Grätzer, G., cf. Fried, E. ..... 21—36
Grätzer, G.—Wenzel, G. H., Notes on tolerance relations of lattices ..... 229—240
Guariglia, E., Uniform boundedness theorems for k-triangular set functions ..... 391—407
Haddad, L.—Rosenberg, J. G.—Schweigert, D., A maximal partial clone and a Shipecki-type criterion ..... 89—98
Henrich, W., Starke Approximation von Orthogonalreihen mit Cesàroverfahren ..... 305—312
Isidro, J. M., cf. Stachó, L. L. ..... 171—190
Kawamura, S.—Takemoto, H.—Tomiyama, J., State extensions in transformation group C^*-algebras ..... 191—200
Kátai, I., Some problems and results on the local behaviour of arithmetical functions 3—10
Kelarev, A. V.—Volkov, M. V., Separation of the radical in ring varieties. II ..... 53—56
Kiss, E. W.—Pöschel, R.—Pröhle, P., Subvarieties of varieties generated by graph algebras ..... 57—75
Kovács, I.—McMillen, W. R., Contraction representation of semigroups in finite von Neumann algebras ..... 133—137
Kurusa, Á., A characterization of the Radon transform and its dual on Euclidean space 273—276
Ky, N. X., On imbedding theorems for weighted polynomial approximation and modulus of continuity of functions ..... 313—325
Leindler, L., On strong approximation with consequences of almost everywhere type 99—108
Leindler, L., Further sharpening of inequalities of Hardy and Littlewood ..... 285—289
Lengvárszky, Zs., On $*$-bases in lattices of finite length ..... 77—81
Majchrzak, R., cf. Banaszczyk, M. ..... 201—207
Mbekhta, M., Sur l'unicité de la décomposition de Kato généralisée ..... 367—377

McMillen, W. R., cf. Kovács, I. ..... 133—137
Németh, J., Fourier series with positive coefficients and generalized Lipschitz classes 291—304
Nicolescu, L.—Pripoae, G., Hypersurfaces de type semi-symétrique dans R^{n+1} ..... 83—87
Páles, Zs., On Young-type inequalities ..... 327—338
Pöschel, R., cf. Kiss, E.—Pröhle, P. ..... 57—75
Pripoae, G., cf. Niculescu, L. ..... 83—87
Pröhle, P., cf. Kiss, E.—Pöschel, R. ..... 57—75
Rachůnek, J., A characterization of o-distributive semilattices ..... 241—246
Rao, G. S.—Swaminathan, M., Best coapproximation and Schauder bases in Banach spaces ..... 339—354
Rosenberg, J. G., cf. Haddad, L.—Schweigert, D. ..... 89—98
Schweigert, D., cf. Haddad, L.—Rosenberg, J. G. ..... 89—98
Seifert, B. G., Non type-preserving automorphism groups of buildings and normalizing Tits systems ..... 247—256
Srivastava, H. M., Some operational formulas of O. V. Viskov involving Laguerre polynomials ..... 129—132
Stachó, L. L.—Isidro, J. M., Algebraically compact elements of *JBW**-triples ..... 171—190
Strommer, J., Ein neuer elementarer Beweis der Kreisaxiome der hyperbolischen Geometrie ..... 269—271
Swaminathan, M., cf. Rao, G. S. ..... 339—354
Szalay, I., On the strong convergence of orthogonal series with almost everywhere uniformly bounded orthonormal systems ..... 109—114
Takemoto, H., cf. Kawamura, S.—Tomiyama, J. ..... 191—200
Талалян, А. А.—Геворкян, Г. Г., Представление абсолютно непрерывных функций многих переменных ..... 277—283
ter Elst, A. F. M., Approximation by unitary operators ..... 145—149
ter Elst, A. F. M., Antinormal operators ..... 151—158
Tietz, H., Schmidtsche Umkehrbedingungen für Potenzreihenverfahren ..... 355—365
Tomiyama, J., cf. Kawamura, S.—Takemoto, H. ..... 191—200
Volkov, M. V., cf. Kelarev, A. V. ..... 53—56
Wenzel, G. H., cf. Grätzer, G. ..... 229—240
Yusun, Tong, Kernels of generalized derivations ..... 159—169

Bibliographie

R. Abraham—J. E. Marsden—J. Ratin, Manifolds, tensor analysis and applications. — W. Ballmann—M. Gromov—V. Schroeder, Manifolds of nonpositive curvature. — I. M. Benn—R. W. Tucker, An introduction to spinors and geometry with applications in physics. — N. Bourbaki, Elements of Mathematics. General Topology Ch. 1—4 and Ch. 5—10. — P. Bremaud, An introduction to probabilistic modelling. — A. Bultheel, Laurent series, their Padé approximations. — T. Dieck—J. Hambleton, Surgery theory and geometry of representations. — Discrete groups in geometry and analysis. — Dynamical systems I. — Function Spaces and applications. — Functional Analysis. — L. Garding—J. Tambour, Algebra for computer science. — I. M. Gelfand, Collected papers II. — F. Gieres, Geometry of supersymmetric gauge theory. — S. G. Gindikin, Tales of physicists

and mathematicians. — A. GUT, Stopped Random Walks. — V. I. ISTRATESCU, Inner product structures. — M. JANTZEN, Confluent string rewriting. — M. KAKU, Introduction to superstrings. — H. LOEFFEL, Blaise Pascal. — D. S. LUBINSKY—E. B. SAFF, Strong asymptotic extremal polynomials associated with weights on R. — R. A. MCCOY—I. NTANTU, Topological properties of spaces of continuous functions. — R. MINES—F. RICHMAN—W. RUITENBERG, A course in constructive algebra. — P. MOLINO, Riemannian foliations. — G. L. NABER, Spacetime and singularities. — Number theory related to Fermat's last theorem. — G. K. PEDERSEN, Analysis Now. — W. S. PETERS, Computing for something. — C. PRESTON, Iterates of piecewise monotone mappings on an intervall. — R. REMMERT—P. ULLRICH, Elementare Zahlentheorie. — B. A. ROSENFELD, A history of non-Euclidean geometry. — P. SAMUEL, Projective geometry. — E. W. SCHMID—G. SPITZ—W. LÖSCH, Theoretical physics on the personal computer. — The science of fractal images. — P. TONDEUR, Foliations on Riemannian manifolds. — Topology and geometry. — A. C. ZAANEN, Continuity, Integration and Fourier theory ..... 211—228

K.-H. BECKER—M. DÖRFLER, Dynamical systems and fractals. — J. BOKOWSKI—B. STURMFELS, Computational Synthetic Geometry. — N. BOURBAKI, Elements of Mathematics. Algebra I. Ch. 1—3, Computative Algebra. — K. S. BROWN, Buildings. — K. CHANDRASEKHARAN, Classical Fourier transforms. — J. N. CEDENBERG, A Course in Modern Geometries. — Complex Analysis. — E. B. DAVIES, Heat kernels and spectral theory. — J. DIEUDONNÉ, A History of Algebraic and Differential Topology. — Differential Games and Applications. — Differential Geometry and Topology. — Dynamical Systems. — Foundations of Software Technology and Theoretical Computer Science. — R. V. GAMKRELIDZE, Analysis I. — Geometric Aspects of Functional Analysis. — V. V. GOLDBERG, Theory of Multidimensional $(n+1)$-Webs. — Harmonic Analysis and Partial Differential Equations. — M. HUMI—W. MILLER, Second Course in Ordinary Differential Equations for Scientists and Engineering. — R. C. KIRBY, The Topology of 4-manifolds. — P. J. M. VAN LAARHOVEN—E. H. L. AARTS, Simulated Annealing: Theory and Applications. — P. LOCHAK—C. MEUNIER, Multiphase Averaging for Classical Systems. — G. MAESS, Vorlesungen Über numerische Mathematik, II. — E. MAOR, To Infinity and Beyond. — Mathematical Aspects of Scientific Software. — Mathematical Economics. — L. MÁTÉ, Hilbert Space Methods in Science and Engineering. — J. C. C. NITSCHE, Lectures on minimal surfaces, I. — R. S. PALAIS—C. L. TERNG, Critical Point Theory and Submanifold Geometry. — R. R. PHELPS, Convex Functions, Monotone Operators and Differentiability. — A. RECSKI, Matroid Theory and its Applications. — E. G. REES, Notes on Geometry, — M. SCHLICHENMAIER, An Introduction to Riemann Surfaces, Algebraic Curves and Moduli Spaces. — L. SIROVICH, Introduction to Applied Mathematics. — H. L. TRINKAUS, Probleme? Höhere Mathematik! Eine Aufgabensammlung zur Analysis, Vektor- und Matrizewachnung, Herausgegeben von H. Neunzert ..... 409—426

Livres reçus par la rédaction ..... 427—430
